

Phantom Mouse - Patented ***Rotating Mousehole Tool***

The Phantom Mouse® was designed to build stands simultaneously while drilling ahead with a top drive unit.

During the initial phase of conventional drilling operations, it is customary to either build stands prior to drilling and to rack in the derrick, or to drill in a single joint at a time. While both of these practices have become acceptable in the industry, it does not allow the operator to take full advantage of the top drive.

Facilitating the operation to drill using pre-assembled stands drastically improves efficiency by reducing the amount of connection time by as much as 2/3.

The unit rotates the tubulars below the rig floor and therefore creates a safer environment by eliminating the need to rotate the stand inside the derrick concurrent with drilling operations. It also greatly enhances safety by reducing the amount of human exposure required during connection operations.

*Available in pneumatic or hydraulic configuration

Phantom Mouse - Patented *Rotating Mousehole Tool*

- Allows the rig crew to make up stands while drilling ahead
- Facilitates BHA handling and makeup

FEATURES

- Rugged construction
- Installs flush with rig floor
- Rotates tubulars below the rig floor
- Uses rig air/hydraulics
- Interchangeable inner bowls

BENEFITS

- Assures extra long durability
- Minimizes trip hazards
- Enhances safety
- No power unit required
- Make up BHAs up to 10 $\frac{3}{4}$ "
